(a) peak concurrence and amplitude vs g
$C_{max} = g\Delta/(\Delta^2 + g^2/4)$
SV peak C
amplitude A
SV fit A
$C_{max}(g) = C_{max}(4\Delta^2/g)$
value
g (log scale)
(b) connected correlators, g = 2Δ
$\langle Z_0 Z_1 \rangle_c$
$\langle Z_0 X_1 \rangle_c$
$\langle X_0 Z_1 \rangle_c$
$\langle Y_0 Y_1 \rangle_c$
connected correlator
time t (1/Δ)
